## Statcast Glossary (<http://m.mlb.com/glossary/statcast>)

### Exit Velocity (EV)

(<http://m.mlb.com/glossary/statcast/exit-velocity>)

How fast, in miles per hour, a ball was hit by a batter.

### Launch Angle (LA)

(<http://m.mlb.com/glossary/statcast/launch-angle>)

How high/low, in degrees, a ball was hit by a batter.

### Barrels

(<http://m.mlb.com/glossary/statcast/barrel>)

A batted ball with the perfect combination of exit velocity and launch angle

### Hard Hit

(<http://m.mlb.com/glossary/statcast/hard-hit-rate>)

Statcast defines a 'hard-hit ball' as one hit with an exit velocity of 95 mph or higher.

### Sweet Spot

(<http://m.mlb.com/glossary/statcast/sweet-spot>)

a batted-ball event with a launch angle between eight and 32 degrees.

### Batted Ball Event (BBE)

(<http://m.mlb.com/glossary/statcast/batted-ball-event>)

A Batted Ball Event represents any batted ball that produces a result.

### Pitch Velocity

(<http://m.mlb.com/glossary/statcast/velocity>)

How hard, in miles per hour, a pitch is thrown.

### Pitch Movement

(<http://m.mlb.com/glossary/statcast/pitch-movement>)

The movement of a pitch is defined in inches, both in raw numbers and as a measurement against average.

### Active Spin

(<http://m.mlb.com/glossary/statcast/active-spin>)

Statcast refers to the spin that contributes to movement as Active Spin.

### Spin Rate

(<http://m.mlb.com/glossary/statcast/spin-rate>)

How much spin, in revolutions per minute, a pitch was thrown with.

### Extension

(<http://m.mlb.com/glossary/statcast/extension>)

How far off the mound, in feet, a pitcher releases the pitch.

### Pop Time

(<http://m.mlb.com/glossary/statcast/pop-time>)

How quickly, in seconds, a catcher can get the ball out of his glove and to the base on a stolen base or pickoff attempt.

**Arm Strength**

(<http://m.mlb.com/glossary/statcast/arm-strength>)

How hard, in miles per hour, a fielder throws the ball.

**Distance Covered**

(<http://m.mlb.com/glossary/statcast/distance-covered>)

How far, in feet, a fielder or runner has traveled on a play.

**Jump (<http://m.mlb.com/glossary/statcast/jump>)**

Jump is a Statcast metric that shows which players have the fastest reactions and most direct routes in the outfield.

**Catch Probability**

(<http://m.mlb.com/glossary/statcast/catch-probability>)

The likelihood, in percent, that an outfielder will be able to make a catch on an individual batted ball.

**Expected Weighted On-base Average (xwOBA)**

(<http://m.mlb.com/glossary/statcast/expected-woba>)

xwOBA is formulated using exit velocity, launch angle and, on certain types of batted balls, Sprint Speed.

**Sprint Speed**

(<http://m.mlb.com/glossary/statcast/sprint-speed>)

A measurement of a player's top running speed, expressed in "feet per second in a player's fastest one-second window."

**Base-to-base Time**

How much time, in seconds, it takes a runner to get from one base to another, like Home To First.

**Lead Distance**

(<http://m.mlb.com/glossary/statcast/lead-distance>)

How far, in feet, a runner is ranging off the bag at the time of a pitcher's first movement or pitch release.

**Outs Above Average (OAA)**

(<http://m.mlb.com/glossary/statcast/outs-above-average>)

A range-based metric of skill that shows how many outs a player has saved over his peers.

**Expected Batting Average (xBA)**

(<http://m.mlb.com/glossary/statcast/expected-batting-average>)

xBA measures the likelihood that a batted ball will become a hit.

**Expected Earned Run Avg (xERA)**

(<http://m.mlb.com/glossary/statcast/expected-era>)

xERA is a simple 1:1 translation of xwOBA, converted to the ERA scale

**Bolt (<http://m.mlb.com/glossary/statcast/bolt>)**

A Bolt is any run where the Sprint Speed (defined as "feet per second in a player's fastest one-second window") of the runner is at least 30 ft/sec.
